PRECISION | SAFE | BUILT FOR INDUSTRY

PREMIUM HAMMER

Tin-plated copper head. Aluminium carbon-fibre shaft.
Anti-slip anodised grip. Delivered in a hard case.

€65
per hammer
case included

620 g	Copper	Carbon	Anodised
Total weight	Tin-plated head	Aluminium carbon shaft	Knurled grip

What it does

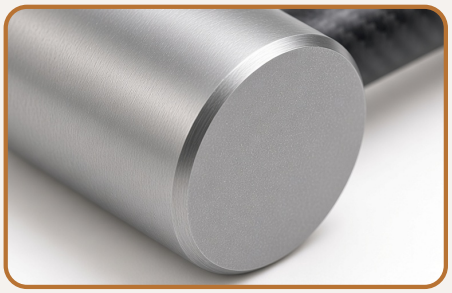

A heavy, soft-faced hammer for assembly and disassembly work where steel would damage the part or spark. The tin-plated copper head drives bearings, bushings, pins and housings into place without marking the workpiece, and does not produce sparks on impact. The light aluminium carbon shaft and knurled grip keep it controlled, even with oil, emulsion or water on your hands.

Why it is better

- Non-sparking on impact for sensitive environments
- Copper face protects bearings and finished surfaces
- Light, balanced aluminium carbon shaft reduces fatigue
- Anti-slip grip stays secure in oil and water
- Tin plating guards the head against corrosion
- Supplied in a protective hard case

Check suitability for explosive atmospheres against your site rules and applicable standards.

Specifications

Weight	**620 g**
Head	**Copper, tin-plated**
Shaft	**Aluminium carbon fibre**
Grip	**Anodised aluminium, knurled**
Behaviour	**Non-sparking on impact**
Supplied in	**Hard case with foam**

Built for

- Automotive and bearing assembly
- Precision electromechanics
- Ex-zones and hazardous areas
- Plant maintenance, paint shops, pyrotechnics
- Precision machine assembly
- CNC workpiece clamping
- Premium gift for professionals

€65
per hammer, case included
